ABSTRACT

The current system in Millennium System which Manage by manually. They collects members data in register manually. Manipulation and data maintaining of this is very hard Data security issue there due to hard Paper copies, sometimes they lost a paper and indirectly data will loss. communication with each other is missing due to paperwork.

Keywords: Data manipulation ,java-Script, Java, CSS.

1. INTRODUCTION

Millennium System is the health system which maintain the health of the person which entering into Fitness Club. It takes a note about all the health information about that person.it takes care about the all health treatments person going through. Who and why he/she join the gym. Attendance, birthdate, anniversaries all kind of essential information will be stored in the database. This system is basically designed to improve and ease a fitness center to automate its operations and to make it user friendly. facility system which takes updates of all registered members. All memberships packages and all the activities. Our "Millennium System" involves lots of features i.e entering data of customer and keeping records of Clients, Equipments, fees. Firstly we did a research on difficulties on Fitness .And by that we have examined all the possibilities to make the process easy.

2. LITERATURE SURVEY

As per [1]Java provides a very well approach to work with different database. A discussion is provided about the database programming using Java for MS-Access database. web service architecture, service is the base of everything. Service is a component that can be published, located, found and invoked by web. It constructs a web service based software system. Fitness gym is one of the places they should visit to perform physical activities. This place has a facilities and equipments that you will use in our training session. There are trainers that give exercise programs and help you to become fit and strong. Every person in the world would like to have a perfect body. In order to have a healthy and a strong body, people would need to consider going to a gym to work out. What do such people expect of a gym? Certainly, patrons would expect a wide selection of equipment. As per [4] While database systems are meant to store data, increasingly demands arise to allow data manipulation within the database context. Oracle Java virtual machine (JVM) has all the features you need to build a new generation of enterprise-wide applications at a low cost. The most important feature is the support for stored procedures. Using stored procedures, you can implement business logic at the server level, thereby improving application performance, scalability, and security.,

3. PROPOSED WORK

The Application contain Services:

- 1) Admin login.
- 2) User Login.
- 3) Member Registration.
- 4) Staff Registration.
- 5) Messaging.

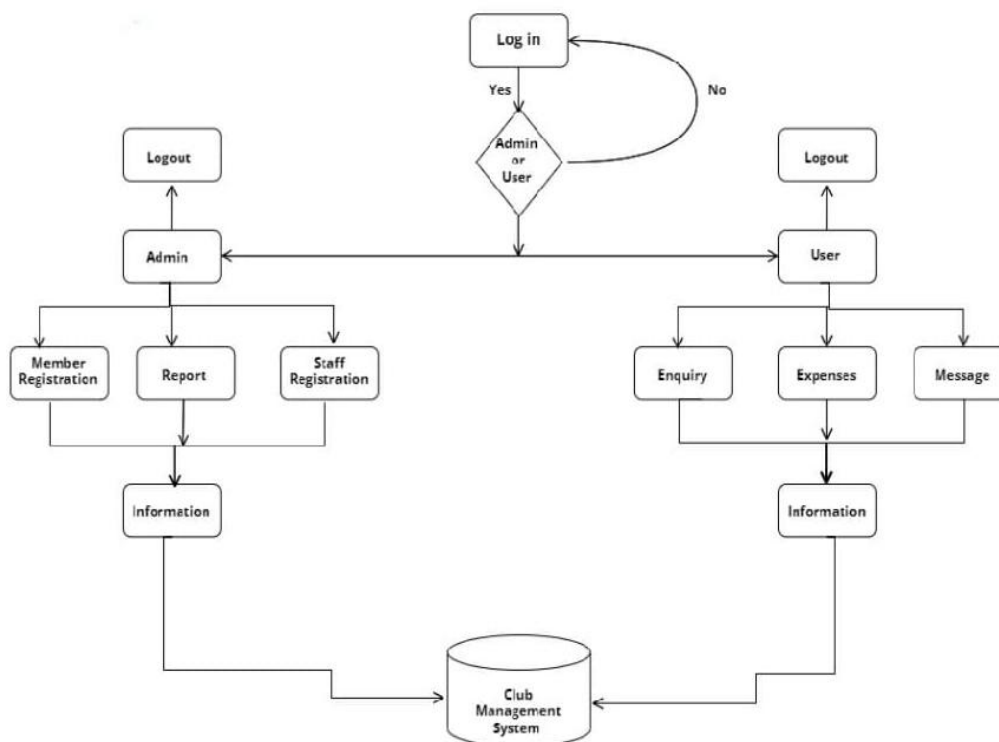

Fig: System Diagram

4. CONCLUSION

Millennium System is Management project objective of this project was to build a program for maintaining Millennium System management system project details of all members, employees and inventory. Millennium system project management of fitness management system project records will be also benefited by fitness management system project whole procedure, which will reduce fitness management system project workload.
